Clone distribution: MGC clone distribution information can be found through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov Series: IRAL Plate: 40 Row: n Column: 11
This clone was selected for full length sequencing because it passed the following selection criteria: GenomeScan gene prediction, Similarity but not identity to protein.

Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       HOMO Sapiens, clone MGC:31944 IMAGE:4878869, mRNA, complete cds.

/note="Organ: spleen; Vector: pOTB7; Site_1: XhoI; Site_2:
ECGNI; cDNA made by oligo-dT prining. Directionally cloned
into EcoRI/AhoI sites using the following 5' adaptor:
GGCACGAG(G). Library constructed by Ling Hong in the
laboratory of Geral M. Rubin (University of California,
Berkeley) using ZAP-cDNA synthesis kit (Stratagene) and
Superscript II RT (Life Technologies). Note: this is a
NIH MGC Library."

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                     1 ATGAGGGTCCCCGCTCAGCT......CCCCTACAGAATGTTCATGA 705

                                                                                                                                                                                                                                                                                              Gaps
                                                                                                      primatised forms (AAW01817 and AAW01818) of the light and heavy chained cynomolgus monkey anti-human B7.1 antigen monoclonal antibody 7C10. Cloned 7C10 light and heavy variable genes are inserted into heavy chain constant region genes to allow prodn. of priman light and heavy chain constant region genes to allow prodn. of primatised antibody in e.g. CHO cells. Primatised 78 and 16C10 anti-B7.1 antibodies have also been produced (see also AAW01819-22). The primatised antibodies inhibit the B7:CD28 pathway, making them useful immunosuppressants for the treatment of autoimmune disorders
                                 Monkey monoclonal antibody binding human B7.1 or B7.2 antigen -useful for treating autoimmune disease or graft-versus-host disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GATGAGGCTGACTATTACTGTCAGGTGTGGGACAGGGCTAGTGATCATCCGGTCTTCGGA

time sequence encourse a primarized toum of the adultony viril tight contains acquaine encourse a primarized toum of the sequence. This sequence is used in a method which studies now monoclonal antibodies (MAb's) that bind selectively to B7.1 (CD80) or to B7.2 (CD86) antigens and inhibits binding of these antigens to CD28 Such Mab's are specific immunosuppressants for treatment of Giseases involving T cell/B cell interactions, particularly autoimmune disease, specifically idiopathic thrombocytopaenia purpura, systemic lupus srythematosus, type I diabetes mallitus, rheumatorid arthritis, peoriasis, aplastic ansemia, inflammatory bowel disease, allery and multiple sclerosis, graft vs. host disease, allery and multiple sclerosis, graft vs. host disease, no inflammatory disease and tumours. Optionally the Mab can be conjugated to a drug or toxin. Mab's, or their fragments, can also be used as imaging agents and as vaccines or immunogens to develop anti-idiotype reagents. Mab's are optionally combined with other proteins or small molecule immunosuppressants. Blocking B7/CD28 interactions induces long-term, antigen-specific immunosuppression, i.e. it inhibits production of interleuvin-2.7.7.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
